

WEARstick Co 25 (UTP 7010)

Rutile-coated stick electrode for heat- and thermal-shock-resistant hardfacings

Classifications										
EN 14700				DIN 85	DIN 8555					
E Z Co1				E20-UN	E20-UM-250-CKTZ					
Characteristics and typical fields of application										
 WEARstick Co 25 is suited to production and repair of hot-working tools subject to extreme temperatures, thermal shock, compression, impact and abrasion. Main application fields are hot dies, hot pressing blades, hot trimming tools and roll mandrils. Special applications are between-layer build-ups on workpieces in nuclear reactor engineering. WEARstick Co 25 shows excellent welding properties, good weld pool control, regular bead appearance and easy slag removal. The weld deposit is highly corrosion and scaling-resistant, has a high work-hardenability and is heat-resistant up to 900 °C. Machinable with cutting tools. Hardness of the pure weld deposit: As welded: approx. 230 HB Work-hardened: approx. 450 HB 										
Typical analysis										
	С	Si	Mn	Cr	Ni		W	Со	Fe	
wt%	0.1	0.5	1.2	21.0	11.0)	14.0	bal.	2.0	
Operating data										
	Polarity		DC + / AC		Dimensio		ion mm	Current A		
						3.2 × 350		80 - 120	80 – 120	
Welding instru	ctions									
Clean welding area, preheat tools to 350 - 400 °C and maintain this temperature during the whole welding process. Slow cooling in a										

furnace. Hold stick electrode vertically and with a short arc. Select lowest possible amperage in order to reduce dilution with the base metal. Re-dry damp stick electrodes for 2 h/300 °C.
