

High Tech Pre-weld anti spatter

Only second to ESAB Aristo Fluid, the ESAB High Tech anti spatter spray is an excellent choice where working temperature does not exceed 150 °C and fumes avoidance is important. Spraying a coat keeps the welding torch nozzle and tip clear and prevents spatter from sticking to the workpiece surface.

- Easy to apply and has excellent wetting characteristics
- Working temperature of 150 °C
- Tested to weld up to 1 m (3 ft) with one time coating of nozzle & tip
- Less cleaning after weld. Swipe of brush over the surface removes spatter or just tapping
- Water based, non-flammable, non-toxic, silicone free, no fumes and safe for welders
- Composed of a special mixture with ingredients in water and a anti spatter base of 16.3%
